

ABSTRACT

The flag caddy of the present invention is useful for safely storing multiple flags and a flag pole and includes a rectangular housing with a door that allows a user to hang multiple flags on horizontal flag rods rotatably positioned within the housing. The flag rods rotate horizontally to allow the safe placement of a flag while several other flags are hanging on similar flag rods. A flag pole storage sleeve is also included and allows the safe storage of a detached flag pole. A hanger or hook attached to the top portion of the housing allows the flag caddy to be stored in a closet or in the garage to protect multiple flags from damage, destruction, dirt and wrinkles.
